

PILGANGOORA PROJECT

CLIENT
Pilbara Minerals

LOCATION
Pilbara, WA

NUMBER OF ROOMS
312

CAMP SETUP TIMEFRAME
<2 months

Pilbara Minerals' Pilgangoora project is located approximately 120km south-east of Port Hedland in the Pilbara region of Western Australia. The Pilgangoora ore body is one of the largest hard rock lithium deposits in the world and is considered strategically important within the global lithium supply chain.

Ausco Modular was engaged by Pilbara Minerals to supply a 312-room camp complete with central facilities to assist with their project shut down operations. Along with the accommodation for the workforce based on site, central facilities consist of kitchen and dining spaces, multiple gyms and recreation rooms, first aid, communications, security, office and reception facilities.

Handover was achieved within just two months; a remarkable effort for the size and scope of the camp and central facilities provided.

Ausco's range of transportable accommodation and camp facilities is innovative in design, extending from mobile or fly-camp solutions to full and permanent mining camps. Our portable, prefabricated buildings allow for significant flexibility, thanks to their modular design, and the convenience of adding or removing buildings as project needs change.
