Nepean Hockey Association

**LOCATION**  
Western Sydney University

**ARCHITECT**  
Ausco Modular

**TIMEFRAME**  
12 weeks

**NUMBER OF MODULES**  
11 modules plus ramp & stairs

Nepean Hockey Association is the first hockey club in New South Wales to choose a modular construction for their new facilities. There are many advantages of choosing a modular building, however a major one for this club was the time saved to construct and install, meaning very little disruption to the players, volunteers and the community.

They upgraded because hockey is a growing sport, and their old clubhouse had no changerooms or social room. People watching the games can now do so on the new deck, which also allows them to socialise more.

Eleven modules were made in Ausco's manufacturing facility in QLD, then transported to the hockey grounds and installed on the site. Their new facilities were constructed, transported, and installed in only 12 weeks.

The club are now enjoying a large social room, kiosk, changerooms, deck and modern amenities.
