

LAIDLEY STATE HIGH SCHOOL

CLIENT	LAIDLEY STATE HIGH SCHOOL
LOCATION	LAIDLEY, QLD
ARCHITECT	AUSCO MODULAR
TIMEFRAME	6 MONTHS
NUMBER OF MODULES	6

THE OBJECTIVE

After being targeted by an arsonist on November 25th, Laidley State High School, in conjunction with Queensland's Department of Education needed to act quickly to ensure that students would be able to resume classes as normal in the next school year.

THE CHALLENGE

Faced with a significant time challenge, the Department, Laidley State High and Ausco worked together to find a solution that could be delivered quickly and would give Laidley State High School's students the best possible facilities to begin the 2019 school year with.

THE SOLUTION

Just two days after the arsonist struck the school, representatives from Ausco were on site, initiating the project and gathering the information required to make this project a success.

In total, 3 classrooms needed to be installed, each with stainless steel benchtops completed with gas turrets to facilitate learning in the sciences.

Ausco was able to complete the works over the Christmas/New Year holidays, with site works commencing on 18 December and handover of the new buildings completed on 25 January.

As principal contractor on the job, Ausco was responsible for gaining building approval, completing designs, connecting services to the building (including gas, water, data and power), installing new laboratory equipment and completing ancillary site works including access ramps and concrete paths around the buildings.

The project was a success and Ausco handed over to the school on 25th January, just prior to school commencing for the 2019 school year. Staff and students at the school have all enjoyed working (and learning) in their temporary science classrooms during the first half of 2019.
