

# Hello there.

EXCELLENT  
NEW PRODUCT  
FOR SALE!

Once the job starts, you don't want anything to stop it, especially your waste tanks. Ausco's new high level alarm gives you peace of mind that the site will keep running.

Critical output

Probably no need to caption this part, but needless to say you don't want it overflowing.

**BOTTOM LINE,** we want to keep the waste inside the tank and keep everyone working. That's where the High Level Alarm comes in.

- Alerts you when the waste tank is close to ruining your day and could shut the site down.
- Easily retrofitted or fitted to the inside of your tank prior to transportation (we recommend fitting when the tank is empty if at all possible).
