

AVOID POST HIRE CHARGES

5 TIPS TO KEEP YOUR BUILDING IN TOP SHAPE!

- 
- 1 Avoid making additional holes in the walls (inside or outside) for new power, data points or conduit – call your Ausco contact instead for guidance!
 - 2 Be careful when putting things up on the walls (inside or outside) – any holes or residue (from double sided tape or silicone) can be difficult to remove, so use the pre-existing screws instead!
 - 3 Remember to use one of the existing screws when affixing your fire extinguisher.
 - 4 Avoid damage to the exterior of the building, such as concrete splatter on walls or dents from site vehicles or equipment by planning ahead! Simply use a barrier to protect your building.
 - 5 Be careful if you fit your own flooring to the building – carpet glue can be difficult to remove without damaging the building's existing flooring.

Of course, sometimes building damage can't be controlled – unforeseen events such as vandalism, fire, theft or an 'Act of God' may strike at any time. For added peace of mind, ask your Ausco contact about our Building Renter Protection.

We're here to help. Please contact your local Ausco contact to discuss any needs you may have.
